

# DOCNAUT

# ONE ENGINE FOR GLOBAL E-INVOICING COMPLIANCE

ANY FORMAT. ANY COUNTRY. ONE PLATFORM.

XML • UBL • EDI • PDF • JSON • CSV • API-READY

Transform any invoice into a compliant format and send it via PEPPOL or local systems—ready for any country.

Eliminate complex integrations and manage global invoicing with a single, scalable platform.

## Take Control of Global Invoicing

### What is Docnaut?

Docnaut is a global e-invoicing engine that standardizes and automates invoice processing across countries. It validates, transforms, submits, and tracks invoices through a single pipeline—eliminating the need for multiple integrations.

### The Solution

#### One Engine for Global Compliance

Docnaut replaces fragmented systems with a single e-invoicing engine:

- Accept any format
- Convert to compliant structure
- Validate & process automatically
- Submit locally & track centrally

### The Problem

Managing global invoicing is complex due to varying regulations, costly integrations, and constant changes. Traditional approaches require multiple integrations—slowing down growth and increasing compliance risks.

### How It Works

A simple and predictable workflow:

1. Upload or send invoices via API
2. Validation & transformation
3. Generate compliance-ready structured output

4. Submission & real-time tracking  
This unified pipeline replaces multiple custom integrations with one scalable system.

## Seamless PEPPOL Connectivity

- Send and receive invoices via PEPPOL
- Fully compliant with global standards
- No country-specific connections needed
- Centralized transaction control

Docnaut is not just an e-invoicing tool — it is a global compliance infrastructure.

Instead of adapting your systems to every country, Docnaut adapts to the world for you.
